

Make Verasys® Yours

See what's new and how you benefit

Verasys controls make it easy to configure a vast array of HVACR equipment and controls for light commercial and mid-market applications. Improve comfort, efficiency and operating costs for one building or a nationwide chain. Here's a look at the exciting enhancements of our newest release.

Connect and control more devices

Verasys technology is BACnet®-based and connects seamlessly with other equipment. The latest release now includes support for:

- PENN® A525 Series electronic walk-in cooler controllers.
- TEC3000 Series full-color smart thermostats, for touchscreen control of rooftop, fan coil and heat pump equipment.
- NS8000 Series Network Sensors – one device for temperature, humidity, CO2 and occupancy sensing.

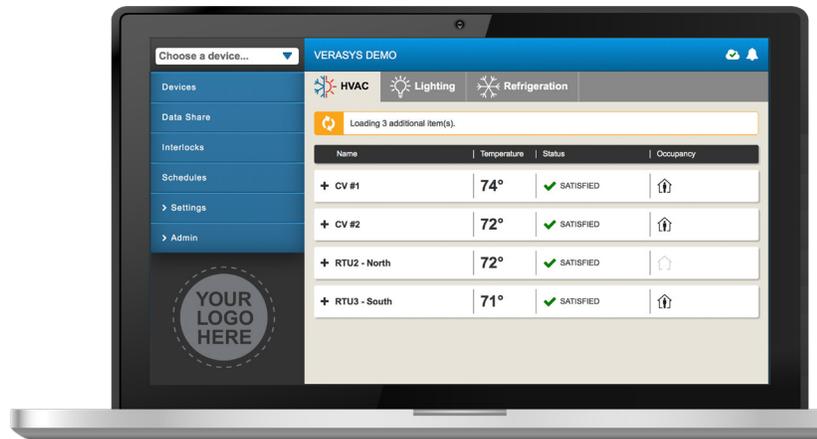

Factory-mounted VAV controls slash installation time and reduce costs through bundling. The Constant Volume, Generic IO and Lighting controllers can all support more sensors, for improved monitoring. The release also includes new boiler and chiller controller applications.

Improve your view

User interface enhancements offer more ways to customize your system and view:

- Configure a custom logo for the login page and navigation page.
- From Facility view, directly change the system mode to heating, cooling or auto.
- Update the dictionary file without waiting for a new release, and see the most up-to-date property names.
- Use the Enterprise view's expanded trending and reporting capability to achieve energy efficiency and other operating goals across multiple locations.

Get all the Verasys benefits

Increase efficiency and reduce costs through advanced control of HVAC, refrigeration, lighting, energy monitoring, CO2 and humidity. Make one building—or a chain with thousands of buildings—more comfortable and efficient. Make Verasys yours today!
